

NAGASOFT 4G LIVE ENCODER

PRODUCT DETAILS

PRODUCT FEATURES

LOCK BUTTON

One button lock, reduce the misoperation during complex environment. Add error-tolerant rate.

VISUAL SCREEN

Intuitive operation and powerful features

INTERNET ACCESS

Add internet access, increase live streaming stability

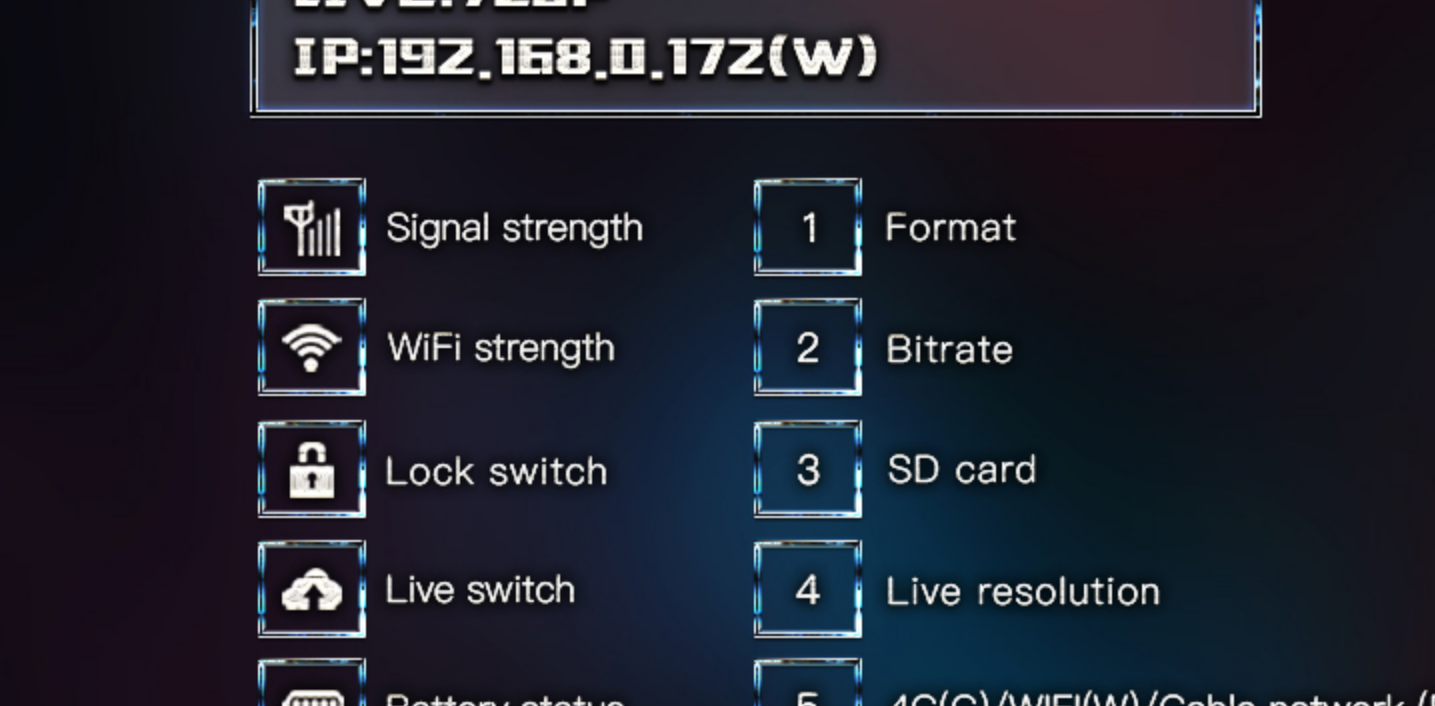

RECORDING FEATURE

One button recording

SIM CARD SLOT

Secure and convenient

LIVE+ INTERCONNECTION SYSTEM

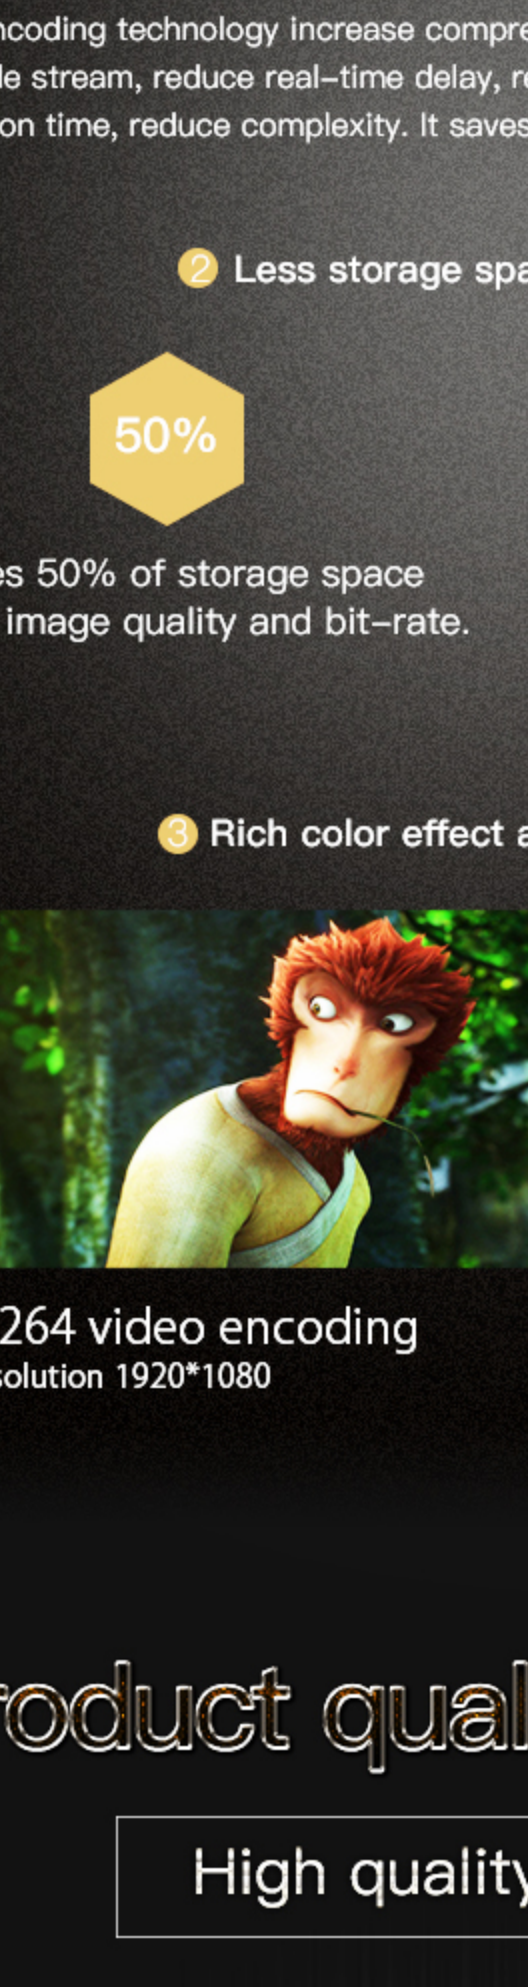

VISUAL SCREEN

Embedded HD OLED screen, visualized interaction.

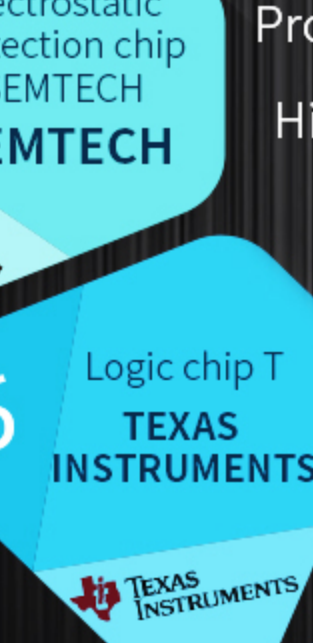

More Powerful features, humanized design and high quality performance bring you a better live broadcasting experience.

- Long battery life
- Dual antenna
- Ethernet port
- Lock button
- Support social media platform easy sharing
- Support Android and IOS system
- 3.5mm audio input
- High quality H.265 image coding technology

Multiple advantages

4G live encoder is a device with high level of speciality

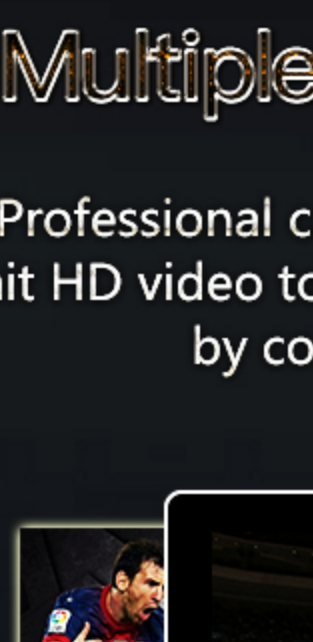

Easy operation

Embedded OLED screen, show real time information condition, support APP remote operation

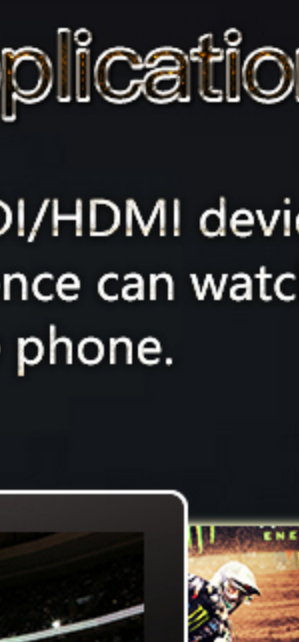

Strong stability

Professional, high performance audio and video encoding chip, high stability embedded Linux system framework

Professionalization

Support TV Broadcasting level 3G SDI/HDMI HD interface, support most of cameras input, support 128G TF card recording backups

High level of compatibility

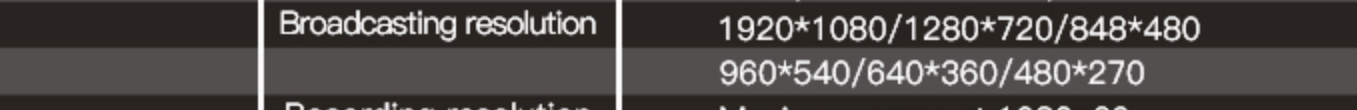

Support internet access, 4G, WiFi three types of uploading, Support standard RTMP streaming protocol, RTSP protocol, Support most of streaming platforms on market

More Professional More Powerful

H.265 encoding and H.264 encoding comparison

Apart from improvement of encoding efficiency, H.265 can operate in complex network condition and become the leading position

1 Transmit video in same bit-rate and resolution, the cost of broadband

H.265 Encoding technology increase compression efficiency, improve recovery ability of wrong code stream, reduce real-time delay, reduce the signal acquisition time and random intervention time, reduce complexity. It saves 50% of broadband in same transmit quality.

2 Less storage space and higher quality image

50%

It saves 50% of storage space in same image quality and bit-rate.

HD 1080P

H.265 supply variable tools to reduce bit-rate, increase encoding efficiency, increase the image quality 30%-40%.

3 Rich color effect and vivid dynamic capture

H.264 video encoding Resolution 1920*1080

H.265 video encoding Resolution 1920*1080

Product quality assurance

High quality spare parts

Multiple scene application

Professional camera through SDI/HDMI device, transmit HD video to the server, audience can watch HD live by computer or mobile phone.

In multiple scene application, 4G live Encoder has powerful adaptation and stability, can achieve variable complex requirements in a live broadcasting event.

Product Parameter

Encoding format	Recording video format	MP4
	Recording compression format	H.265/H.264
	Audio compression	AAC(48K)
	Video input format	720p:25/30/50/60/120 fps 1080i:50/60 fps 1080p:25/30/50/60 fps
	Broadcasting resolution	1920*1080/1280*720/848*480 960*540/640*360/480*270 Maximum support 1080p60
Recording storage	Recording resolution	1080p60
	storage card type	TF card
	Storage card capacity	maximum support 128G
Network feature	WiFi	Single frequency
	4G network	support different operator network
	SIM card type	Nano SIMCard
Power	Internet access	MB interface
	Power interface	DC5V, 2000mA[Micro USB接口]
	Power frequency	50HZ/60HZ
	Battery capacity	3.7V/4000mAh
	Maximum power consumption	4W
Transmission	Internet protocol	HLS/RTMP/P2P
Structure	Size	111.2*93*35mm
Working environment	working temperature	0°C~45°C
	Working humidity	15°C~85°C
	Stock temperature	5°C~40°C
